進階資料庫實務

Class 4 - 進階查詢功能

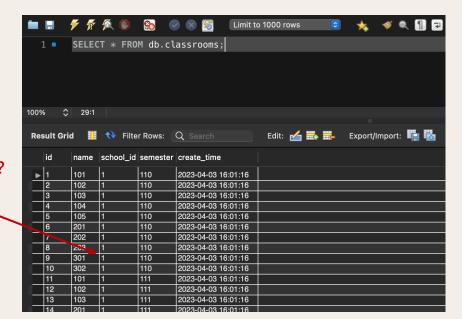

授課教師: 戚祐寧

想一想?

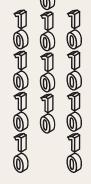

我們已經可以透過查詢語法,可以知道班級資料表內所有資料,但我們該如何解讀裡面的資料呢?

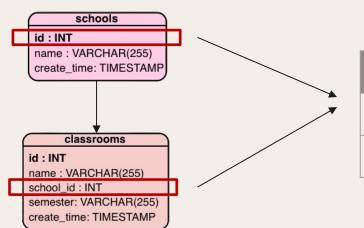

school_id 編號 1 是哪間學校?

將資料表合起來

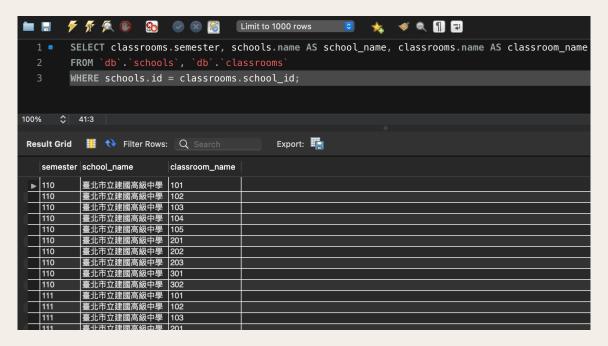

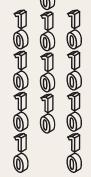

semestar	school_name	classroom_name
111	臺北市立建國高級中學	101
111	臺北市立第一女子高級中學	101

將資料表合起來

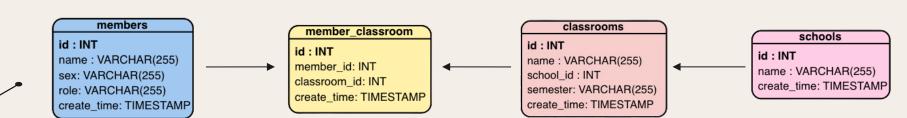

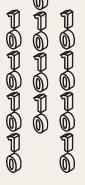

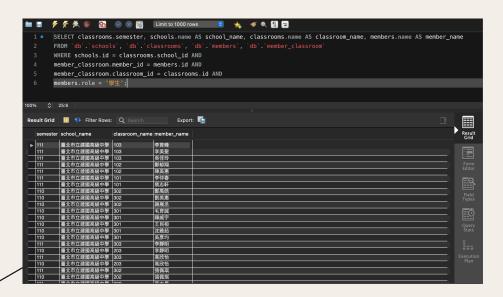

列出每位學生所屬的學校與班級,如下表:

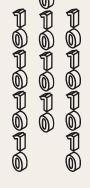

semestar	school_name	classroom_name	student_name
110	臺北市立建國高級中學	101	吳宇翔
110	臺北市立第一女子高級中學	101	吳明惠

列出每位學生所屬的學校與班級

SELECT

classrooms.semester, schools.name AS school_name, classrooms.name AS classroom_name, members.name AS member_name

FROM

`db`.`schools`,
`db`.`classrooms`,
`db`.`members`,
`db`.`member_classroom`

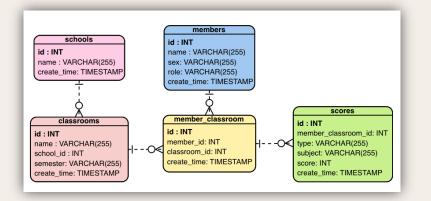

WHERE

schools.id = classrooms.school_id AND member_classroom.member_id = members.id AND member_classroom.classroom_id = classrooms.id AND members.role = '學生';

列出每位學生所屬的學校與班級、並列出每一次考試成績,如下表:

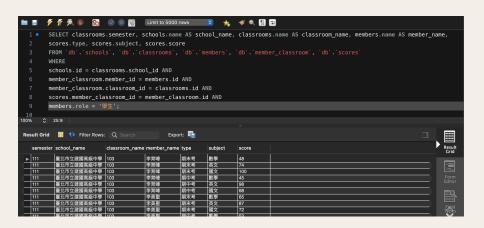

|--|

semestar	school_name	classroom_name	student_name	type	subject	score
110	臺北市立建國高級中學	101	吳宇翔	期末考	數學	74
110	臺北市立第一女子高級中學	101	吳明惠	期末考	英文	85

列出每位學生所屬的學校與班級、並列出每一次考試成績,如下表:

SELECT

classrooms.semester, schools.name AS school_name, classrooms.name AS classroom_name, members.name AS member_name, scores.type, scores.subject, scores.score

FROM 'db'.'schools', 'db'.'classrooms', 'db'.'members', 'db'.'member classroom', 'db'.'scores'

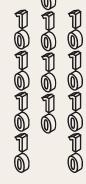

WHERE

schools.id = classrooms.school_id AND member_classroom.member_id = members.id AND member_classroom.classroom_id = classrooms.id AND scores.member_classroom_id = member_classroom.id AND members.role = '學生':

將欄位合起來

列出每位學生每次考試總分,如下表:

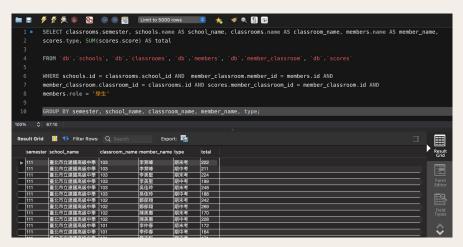

semestar	school_name	classroom_name	student_name	type	subject	score
110	臺北市立建國高級中學	101	吳宇翔	期末考	數學	74
110	臺北市立建國高級中學	101	吳宇翔	期末考	英文	54
110	臺北市立建國高級中學	101	吳宇翔	期末考	國文	61

semestar	school_name	classroom_name	student_name	type	total
110	臺北市立建國高級中學	101	吳宇翔	期末考	189

將欄位合起來

列出每位學生每次考試總分,如下表:

※ SUM 為內建加總函式,平均為 AVG

SELECT

classrooms.semester, schools.name AS school_name, classrooms.name AS classroom_name, members.name AS member_name, scores.type,

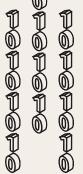

SUM(scores.score) **AS** total

FROM `db`.`schools`, `db`.`classrooms`, `db`.`members`, `db`.`member classroom`, `db`.`scores`

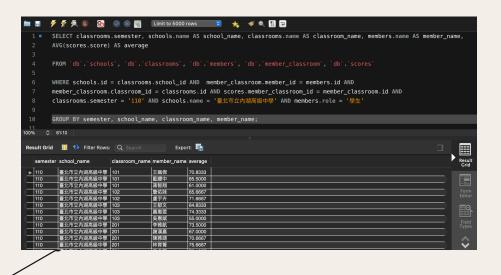

WHERE

schools.id = classrooms.school_id AND member_classroom.member_id = members.id AND member_classroom.classroom_id = classrooms.id AND scores.member_classroom_id = member_classroom.id AND members role = '學牛'

GROUP BY semester, school_name, classroom_name, member name, type

列出 110 學年度於『臺北市立內湖高級中學』每位學生總平均 (期中 & 期末)

SELECT

classrooms.semester, schools.name AS school_name, classrooms.name AS classroom_name, members.name AS member_name, AVG(scores.score) AS average

FROM `db`.`schools`, `db`.`classrooms`, `db`.`members`, `db`.`member_classroom`, `db`.`scores`

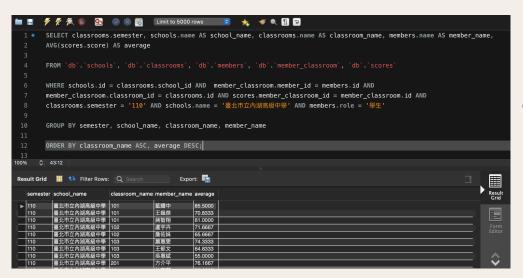

WHERE

schools.id = classrooms.school_id AND member_classroom.member_id = members.id AND member_classroom.classroom_id = classrooms.id AND scores.member_classroom_id = member_classroom.id AND classrooms.semester = '110' AND schools.name = '臺北市立內湖高級中學' AND members.role = '學牛'

GROUP BY semester, school_name, classroom_name, member name;

排序

列出 110 學年度於『臺北市立內湖高級中學』各班學生總平均 (按高到低排序)

※ ASC: 升序 (由小到大)、 DESC: 降序 (由大到小)

Summary

- 如何將多張資料表合併
- 如何將欄位 Group By 並運用內建函式進行計算
- 欄位 Order By 排序 (ASC DESC)

Thanks!
